

ValidAgent – An Open Repository of Generative Agents for Behavioral Simulation and Multi-Agent Systems

Anika Bittner, Timo Heinrich, **Leon Lühns**, Matthias Meyer, Christian Stindt von Dohm

*Researchers have built empirically grounded agents that work.
But have you ever actually used one from another study?*

Today agents are:

- Built for one study – not for reuse
- Documented individually – not comparably
- Framework specific – not portable

Our response:

**An open repository for browsing, comparing, and reusing
curated, empirically validated generative agents for behavioral
simulations and multi-agent systems.**
